

SUJIT SWAIN

Java Full-Stack Engineer | Java | Spring Boot | React | AWS | Microservices

Bangalore, India | sujitswain2023@gmail.com | +91 8925114798 | [linkedin.com/in/sujit-swain-tech](https://www.linkedin.com/in/sujit-swain-tech)

PROFESSIONAL SUMMARY

Java Full-Stack Engineer with over 2+ years of professional experience designing, building, and deploying secure web applications, RESTful APIs, and microservices within high-performance Agile development ecosystems. Core technical competency spans backend systems architected with Java 17 and Spring Boot, seamlessly paired with interactive, scalable frontend user interfaces powered by React and JavaScript. Recognized for specialized expertise in high-volume batch and data processing pipeline tuning, demonstrated by successfully refactoring multithreaded execution systems to cut compute runtime by 88%. AWS Certified Cloud Practitioner with experience deploying serverless cloud systems, Kafka messaging streams, and automated unit tests.

TECHNICAL SKILLS

- Programming & Frameworks:** Java (17+), Python, Spring Boot, Spring Data JPA, Spring Security, Spring Batch, Hibernate, OAuth2, JWT
- Frontend Development:** JavaScript (ES6+), React, HTML5, CSS3, JSON, Responsive Web Design, REST API Integration
- Cloud & DevOps:** AWS (S3, Lambda, DynamoDB, CloudWatch), Jenkins, GitHub Actions, Docker, CI/CD Engineering
- Databases & Messaging:** MySQL, Redis (Caching & Shared State Caching), Apache Kafka, Azure Service Bus
- Testing & Infrastructure:** JUnit, Mockito, Kibana, Postman, Swagger, Git, Maven, Gradle, Jira, Confluence

WORK EXPERIENCE

Software Engineer | Capgemini, Bangalore

Jan 2024 - Present

Client: Goldman Sachs (Financial Services Account)

- Developed responsive enterprise UI components using React**, closely integrating them with high-performance Spring Boot and Spring MVC REST APIs to manage internal financial workflows.
- Constructed stateless API authentication modules using Spring Security, OAuth2 protocols, and JSON Web Tokens (JWT)** to secure routes across distributed environments.
- Refactored legacy multithreaded data processing engines** to handle **10K–50K CSV records** concurrently, dropping execution time from 10 minutes down to 1.2 minutes to achieve a quantified **88% performance win**.
- Configured Spring Batch processing architectures** and optimized **SQL** query pathways, utilizing **AWS S3** for data storage and CloudWatch logs for system monitoring.
- Designed contract-first RESTful APIs** using **Swagger** specifications, enforcing strict backend input validation using Hibernate Validator to guarantee data integrity before persistence.
- Implemented global exception handling filters** and structured DTO design patterns to standardize REST response shapes, reducing API debugging time across the full-stack architecture.
- Collaborated within cross-functional Scrum teams**, driving peer code reviews, lowering technical debt, and tracking sprint delivery predictability via Jira.

Client: Manulife (Insurance Domain Account)

- Mapped front-end client interface actions to highly customizable backend report-building mechanisms operating with **FreeMarker** HTML styling and interactive **PDF AcroForm** templates.
- **Integrated Azure Service Bus endpoints** into messaging workflows to drive **non-blocking, asynchronous communication pathways**, completely decoupling heavy file assembly tasks from UI interactions.
- **Optimized backend report workflows** by structuring clean domain data models to map complex life insurance application states into structured document layouts.
- **Led code quality maintenance** by managing cross-repository peer review pipelines, maintaining strict style parameters, and enforcing comprehensive testing using **JUnit and Mockito**.
- **Guided freshers and junior engineers** through system architecture onboarding, baseline development workspace setups, and standardized **Postman API testing** configurations to accelerate overall team delivery speeds.

TECHNICAL PROJECTS

Order Processing System – Event-Driven Microservices Layer

[Github](#)

Tech Stack: Java, Spring Boot, Apache Kafka, MySQL, AWS S3, Stripe

- Designed a decoupled, event-driven microservices ecosystem featuring independent Order, Payment, and Notification services using Spring Boot and Apache Kafka.
- Implemented strict idempotent event processing strategies, payment webhook handlers, and optimistic locking to prevent race conditions during heavy database transactions.
- Integrated AWS S3 for secure cloud invoice storage while maintaining asynchronous, non-blocking communication between services.

Distributed API Gateway & Rate Limiter

[Github](#)

Tech Stack: Java, Spring Boot, Redis, Docker

- Developed a high-throughput API Gateway using Spring Boot, deploying custom Token Bucket rate-limiting algorithms to handle tiered user request quotas.
- Used Redis as a shared state engine to track user request counts across multiple application instances accurately.
- Integrated Redis Pub/Sub to synchronize policy changes across all gateway nodes in real-time without requiring application restarts.

CERTIFICATIONS

- [AWS Certified Cloud Practitioner – CLF-C02 | 2026](#)

EDUCATION

- **Bachelor of Technology in Information Technology** (Aug 2019 - May 2023)
Puducherry Technological University | CGPA: 9.33

LANGUAGES

- English, Tamil, Odia, Hindi
