

SUJIT SWAIN

Java Full-Stack Engineer | Java | Spring Boot | React | AWS | Microservices

Bangalore, India | sujitswain2023@gmail.com | +91 8925114798 | [linkedin.com/in/sujit-swain-tech](https://www.linkedin.com/in/sujit-swain-tech)

PROFESSIONAL SUMMARY

Java Full-Stack Engineer with 3 years of experience building Java and Spring Boot applications, REST APIs, microservices, and React-based web applications for financial services and insurance domains. Experienced in backend development using Kafka, SQL, multithreading, and Spring Batch, along with building frontend interfaces using React and JavaScript. Improved high-volume CSV processing performance by 88% while handling 10K–50K records. AWS Certified Cloud Practitioner with hands-on experience with AWS S3, Lambda, and CloudWatch.

TECHNICAL SKILLS

- **Programming & Frameworks:** Java (17), Spring Boot, Spring Security, Spring Batch, JPA/Hibernate, OAuth2, JWT
- **Frontend Development:** React JS, JavaScript, HTML5, CSS3
- **Cloud & DevOps:** AWS (S3, Lambda, CloudWatch), Jenkins, GitHub Actions, Docker, CI/CD Engineering
- **Databases & Messaging:** MySQL, Redis, Apache Kafka, Azure Service Bus
- **Testing & Infrastructure:** JUnit, Mockito, Kibana, Postman, Swagger, Git, Maven, Gradle, Jira, Confluence

WORK EXPERIENCE

Software Engineer | Capgemini, Bangalore

Jan 2024 - Present

Client: Goldman Sachs (Financial Services Account)

- Built Spring Boot REST APIs and integrated them with React-based configuration dashboards for internal financial workflows.
- Constructed stateless API authentication modules using **Spring Security, OAuth2 protocols, and JSON Web Tokens (JWT)** to secure routes across distributed environments.
- Optimized multithreaded CSV processing for **10K–50K** records, reducing execution time from 10 minutes to 1.2 minutes, an **88% improvement**.
- **Configured Spring Batch processing architectures** and optimized **SQL** query pathways, utilizing **AWS S3** for data storage and CloudWatch logs for system monitoring.
- Designed REST APIs using **OpenAPI/Swagger** and implemented request validation with Hibernate Validator before database persistence.
- Implemented centralized exception handling using **@RestControllerAdvice** and **@ExceptionHandler** to return consistent **JSON error responses** for validation, database, and application errors.
- Developed unit tests using JUnit and Mockito for core service and validation logic.
- **Collaborated within cross-functional Scrum teams**, driving peer code reviews, lowering technical debt, and tracking sprint delivery predictability via Jira.

Client: Manulife (Insurance Domain Account)

- Mapped front-end client interface actions to highly customizable backend report-building mechanisms operating with **FreeMarker** HTML styling and interactive **PDF AcroForm** templates.
- Integrated **Azure Service Bus** for asynchronous processing, allowing **file generation workflows** to run independently of UI requests.
- Developed backend data models to transform life insurance application data into **structured inputs for PDF report** generation.
- Led peer code reviews across repositories and enforced coding standards and unit testing practices.
- **Guided freshers and junior engineers** through system architecture onboarding, baseline development workspace setups, and standardized **Postman API testing** configurations to accelerate overall team delivery speeds.

TECHNICAL PROJECTS

Order Processing System – Event-Driven Microservices Layer

Tech Stack: Java, Spring Boot, Apache Kafka, MySQL, AWS S3, Stripe

- Designed a decoupled, event-driven microservices ecosystem featuring independent Order, Payment, and Notification services using Spring Boot and Apache Kafka.
- Implemented strict idempotent event processing strategies, payment webhook handlers, and optimistic locking to prevent race conditions during heavy database transactions.
- Integrated AWS S3 for secure cloud invoice storage while maintaining asynchronous, non-blocking communication between services.
- Implemented idempotent payment webhook processing to safely handle duplicate events.

Distributed API Gateway & Rate Limiter

Tech Stack: Java, Spring Boot, Redis

- Developed a high-throughput API Gateway using Spring Boot, deploying custom Token Bucket rate-limiting algorithms to handle tiered user request quotas.
- Used Redis as a shared state engine to track user request counts across multiple application instances accurately.
- Integrated Redis Pub/Sub to synchronize policy changes across all gateway nodes in real-time without requiring application restarts.

CERTIFICATIONS

- [AWS Certified Cloud Practitioner – CLF-C02 | 2026](#)

EDUCATION

- **Bachelor of Technology in Information Technology** (Aug 2019 - May 2023)
Puducherry Technological University | CGPA: 9.33

LANGUAGES

- English, Tamil, Odia, Hindi
